

1. Considering the book you shouldn't use navigation arrows because when you're creating a domain model, you're creating a two-way relationship, but when you use the arrow it represents a one-way relationship. Also you are creating a domain model not a software perspective.
Reference: Section 16 - Chapter 4. "*Guideline*: [...] avoid navigation arrows, as a domain model is not a software perspective."
2. The attribute in Berth "Serial number" should be explained, because we don't really understand why you should have a serial number, as attribute in Berth. Why just not a number or a placement?
3. We also think that boat details should be a part of Boat, not BoatRegistry. We also don't understand what boat details is. Because isn't boat details the attributes of boat?
4. In Boat, the attribute Size, could be changed to, Width & Length. Because size isn't explaining what size is. Is it S, M, L, XL or is it some set of special boat sizes?
5. Membership fee isn't part of any of the requirements for the first part of workshop 1 and shouldn't be included.
Reference: Section 9 - Chapter 10. Talks about this "Do not add things that are not there."
6. Secretary/Member - DRY id password. The attributes Id and Password are repeated in Member and Secretary.
Reference: Section 32 Chapter 2 - Generalization discusses this.
7. We also think that there should be a relationship between BoatRegistry & Member.
8. Events should not be an attribute of Calendar, it should be a class. An event should include title and date.
Reference: Section 9 Chapter 16 - Attributes "Focus on Data Type Attributes in the Domain Model"
